WITH PLASSON RURAL

PLASSON GOES ON & STAYS ON

CHOOSE PLASSON RURAL COMPRESSION FITTINGS FOR RELIABILITY AND PEACE-OF-MIND.

PLASSON rural compression fittings go on the pipe and seal watertight instantly. It isn't magic, just the result of some clever engineering.

INSTANT SEALING

PLASSON rural compression fittings go on the pipe and seal watertight instantly. Our captive o-ring creates a seal before you even tighten the nut. And you don't need any special tools to install our fittings. Just do the nuts up firmly by hand and the job is done.

FLEXIBLE

Our rural fittings can be converted to connect to metric poly (blue line), PVC, steel, and copper pipes.

LONG BODY

The long body on PLASSON fittings ensures the seal will not be affected by bending loads or ground movement.

PULL-OUT RESISTANT

All PLASSON fittings exceed the pull-out requirements of Australian Standards making PLASSON ideal for submersible bore jobs.

CONVERSION KITS

Discover Even More Ways to Connect

PLASSON understands not everything lines up perfectly in the real world. That is why our range includes Conversion Kits. These kits contain helpful adaptors that allow you to easily switch between metric, rural, copper, PVC pipe and threads.

The body design of all PLASSON compression fittings is the same so it is easy to adapt fittings to several different pipe materials, sizes and threaded connections. PLASSON has engineered this flexibility into the range to provide a solution for almost any situation without the need for lots of specialised fittings.

FEATURES:

- ✓ Easily joins different pipe materials
- ✓ Reliably connects different pipe sizes
- ✓ More off-the-shelf solutions from fewer fittings

Chemical Resistance

PLASSON Fittings are supplied, as standard, with polyacetal split rings and NBR O-rings which are suitable for water. For aggressive chemical applications CPVC split rings and EPDM or FPM O-rings can be supplied to produce a higher chemical resistance.

Quality Certificates

Plasson fittings are tested and approved according to ISO 17885 (replaced ISO 14236), water and AS/NZ 4129.

Threads

All threads conform to ISO-7/1 (BSPT), BS 21 - 1973, DIN 2999, NEN 3258, AS 1722 Part 1 - 1975.

All internal (female) threads smaller than 3" are parallel (Rp).

All other threads (male and female) are tapered (R).

Plasson recommend the use of PTFE tape in threaded connections.

Installation

Before installation ensure that the end of the pipe to be inserted into the fitting is free of scratches and other imperfections and that both the pipe and the fitting itself are clean of sand, mud, stones etc.

Do not over tighten nut when closing. Never use wrenches or spanners with handle lengths longer than 46 cm - excessive torque during tightening can spread nut cone and result in pull outs. If fittings are reused, Plasson recommend replacing the grip ring with a new one.

Electrofusion

Plasson Electrofusion fittings are globally recognized as best in class. Most fittings include SmartFuse resistors built into the welding terminal, this enables automatic weld time recognition when used with a Plasson electrofusion machine.

Polyethylene: PE 100 RC.

Brass components: Lead Free DZR Brass.

Stainless Steel components: SS316.

Electrofusion fittings: Are batch controlled, record the batch number on the fitting label and contact Plasson Australia for a copy of the material datasheet / EN 10204 3.1 Inspection Certificate.

Installation:

Plasson Australia no longer publish generic how to perform electrofusion instructions. Plasson Australia recommend installation as per POP001 - Electrofusion Jointing of PE Pipe and Fittings for Pressure Applications as published by Plastics Industry Pipe Association of Australia (PIPA). This is free to download from <https://pipa.com.au>

Some products are unique to Plasson and require specialised tools or installation instructions, these products come with printed instructions included in the fitting bag.

Simona Spigot fittings

Polyethylene: PE 100 RC.

Simona spigot fittings are batch controlled, record the batch number on the fitting label and visit <https://certificates.plasson.com.au/> for a copy of the material datasheet / EN 10204 3.1 Inspection Certificate.

Backing Flanges

Galvanised flanges are hot dipped galvanised.

Stainless Steel are SS316L.

Galvanized ANSI flanges are A105 grade.

Plasson flanges are heat traced. Record the product code and heat code clearly marked on the flange and contact Plasson Australia for a copy of the heat certificate.

- 10.3. PLASSON reserves the right to deliver the Goods by instalments and to invoice the Customer for each instalment of Goods delivered where, in the opinion of PLASSON, it is reasonable to do so.

- 10.7. Subject to any express warranty provided in writing by PLASSON to the Customer, failure by the Customer to notify PLASSON within seven days of delivery that the Goods are not in accordance with their description in the Confirmation of Order shall constitute an unqualified acceptance of the Goods and a waiver by the Customer of all claims with respect to the Goods.
